

DIABETIC PRO

THE FUTURE OF HEALTH FOR DIABETES

With the launch of its groundbreaking product, Diabetic Pro, Playpal is all set to completely revolutionize the landscape of proactive health, with an added focus on diabetes patients.

The healthcare industry is massive and continues to grow. Global healthcare spending is projected to cross \$10 trillion by 20221. Diabetes is a major concern, with more than 425 million people suffering from diabetes worldwide.

With today's outburst of devices, smart gadgets, and health tech apps, a connected and proactive approach is the new face of health. The problem is, data is highly fragmented and difficult to track.

That's where Playpal Dia-Pro steps in, offering a unique collection of integrated elements that allows you to best manage your diabetes and become a part of Playpal's health ecosystem by:

Consolidating all the health and wellness data by integrating with IOT devices to create a health profile that makes all the information that is needed, simple, accessible, and secure (via international security standards).

Using the power of AI to provide predictive analysis along with health goals & recommendations tailored specifically to your diabetes condition.

Providing each person with the means to quantify their health by calculating a personalized "HICO Score" based on Playpal's Health Capital Model.

Empowering you with the ability to transform your health into monetary wealth with "Health Mining". Here's each person's chance to get rewards and make money while improving their health!

There are 3 major elements that make up Diabetic Pro

The Playpal Partner IOT Devices for Diabetes, 'The PlayPoints', and 'The Playpal Platform'.

Diabetic Pro offers a wide variety diabetes centric devices that seamlessly integrate with the platform and provide real time health data (e.g., blood glucose level, insulin administration, nutrition and physical activity data) to the platform for its AI-based health analytics. These are Playpal's **Partner IOT Devices for Diabetes**. They include:

EEG Cool Headband

Fitness Ring

Glucometer Patch

TicWatch

Smart Shoes

Abit Glucometer

The **Playpal Platform** places Diabetes Pro at the heart of its diabetes sub-ecosystem within Playpal's larger ecosystem of health. The platform asks you specific questions about your diabetes condition and family medical history, gets data from your Partner IOT Devices for Diabetes, and then tailors your experience accordingly. You can access your tailored recommendations, goals, nutritional breakdown, HICO score, and visualizations of your health on the Platform.

The Platform is also the site where you can mine your health. Health mining is a novel concept that Playpal is incorporating into Diabetic Pro via Playpal's very own reward system: **The PlayPoint**.

Once the users have integrated their Partner IOT Devices for Diabetes with The Playpal Platform, Playpal's AI engine then processes this data and rewards users with PlayPoints against healthy actions. So, you can earn actual money, just by investing in your health!
